AIR VENTS FOR FLAT ROOFS IN IGOM EE

Art. 48.3

Art. 49

Art. 51
Tube connector

Art. 49.7

Art. 49.1
Art. 49, 49.1 and 49.9 are suitable for application with waterproofing membranes such as APP, SBS and roofs covered with hot bitumen or tarred felt. Air Vents designed and patented by ITALPROFILI is one of the most effective ventilation system as it discharges steam build-up under the waterproofing. It does not reduce the water repellent capacity of either the prefabricated membranes or the bitumen covering or the insulation capacity of the waterproofing. It avoids serious inconveniences such as curling, topping-up, damp insulating sheeting, with consequent partial or total loss of its properties. Due to a very careful construction and the used materials, this air vent has all specific features to prevent such drawbacks.

Installation Method PAG. 51

Art. 49, 49.1 and 49.9 are one of the most effective ventilation system discharge steam build-up under the waterproofing. Italprofil air vents do not reduce the water repellent capacity of either the prefabricated membranes or the bitumen covering or the insulation capacity of the waterproofing. Suitable for application with APP, SBS, bituminous membranes.
